FM8001 - Application Note

Layout and thermal guidelines for FM8001

1. Scope

This application note is a demo artifact for website preview.

2. Recommended layout

Keep the input capacitor loop as small as possible.

Use a solid ground plane under the device.

3. Thermal considerations

Provide sufficient copper area on the drain / VOUT pads.

4. Measured values (demo)

Input Voltage	2.2V - 5.5V
Output Current	500mA
Dropout	120mV @ 500mA
Output Noise	17uVRMS
PSRR	65dB @ 1kHz
